

2. Git ignore .dox

- Explain git ignore

A .gitignore file tells Git which files and directories should not be tracked.

Git ignores files that:

- Are temporary
- Are automatically generated
- Contain logs
- Contain build output
- Store IDE settings

- Explain how to ignore unwanted files using git ignore

A .gitignore file is a special file in Git that tells Git which files and folders should not be tracked or committed to the repository. This helps keep your repository clean by excluding temporary, generated, or sensitive files.

3. GIT-HOL.docx

- Explain branching and merging

A branch in Git is an independent line of development. It allows developers to work on new features, bug fixes, or experiments without affecting the main project. By default, every Git repository starts with a main (or master) branch.

Merging is the process of combining the changes from one branch into another. Once the work on a branch is completed and tested, it can be merged into the main branch.

- Explain about creating a branch request in GitLab

1. Log in to your GitLab account.
2. Open your project (repository).
3. Go to Repository → Branches.
4. Click New Branch.
5. Enter a branch name .
6. Select the source branch.
7. Click Create Branch.

4 GIT-HOL.docx

- Explain how to resolve the conflict during merge.

git checkout main

git merge feature-login

git status

Resolve conflicts in the file

git add App.java

git commit -m "Resolved merge conflict"

git push origin main

5. GIT-HOL.docx

- Explain how to clean up and push back to remote Git

git checkout main

git pull origin main

git branch -d feature-login

git push origin main

git push origin --delete feature-login

git status
